new from RUSSIA!

Soviet Journal of Quantum Electronics

SOVIET JOURNAL OF QUANTUM ELECTRONICS

The American Institute of Physics has added to its list of 13 major Russian journals that are translated from cover to cover, the journal *KVANTOVAYA ELEKTRONIKA*. New in 1971, this journal is edited by Academician N.G. Basov, who shared the 1964 Nobel Prize in physics for development of the laser with Charles H. Townes and A. Prokhorov.

This bimonthly journal covers experimental and theoretical work on quantum electronics and its applications in science and technology: lasers, interaction of coherent radiation with matter, holography, nonlinear optics, and related topics. The editors say, "We hope to concentrate, to a significant degree, the fundamental publications on quantum electronics in a single publication."

The importance that the Russians attach to this journal is indicated by the fact that they are printing more than twice as many copies as they print of their famous *ZHURNAL EKSPERIMENTAL'NOI I THEORETICHESKOI FIZIKI*, which we publish as *SOVIET PHYSICS-JETP*.

Volume I (July 1971 - June 1972) of *SOVIET JOURNAL OF QUANTUM ELECTRONICS* covers the 1971 issues of *KVANTOVAYA ELEKTRONIKA*.
